now we have observed that all the factors/columns affecting the PH value as slopes were not becoming zero also we have observed that how lasso regressor tries to diminish the factors!

Conclusion: We have merged all the dataset, perform EDA, removed noise/null/inf/out of range values from each respective columns! adding to existing work we have also applied regression models in order to know how it really effects the results!

Task4

In this Task we going to apply multiple Regression model in order to predict the value PH not the class for given input since class deals with only acidic basic or neutral catagories.
